MyCommPal | One-Page MVP Specification

Your Personal AI Communication Mentor • Buildathon • Cohort 52

User & problem Working Product Managers often know their product decisions but struggle to articulate the recommendation, evidence, trade-offs and impact under pressure. In initial research, 9 of 14 participants reported articulation-related challenges (directional sample).

Product hypothesis A focused diagnosis, one relevant technique and deliberate retry will help PMs communicate decisions more clearly—not just generate polished AI answers.

JTBD "When I need to present or defend a product decision, help me find the gap in my explanation, learn a technique and practice until my reasoning is clearer."

P0 user journey

1 · My Goal	**Choose goal, audience and a PM scenario or describe a real situation.**
2 · Assess Me	Type or speak a baseline response; Vira assesses clarity, structure, conciseness and PM decision communication when applicable.
3 · My Personal Plan	Receive evidence-grounded diagnosis, one priority skill, technique and examples; deeper scores available on demand.
4 · Practice With Vira	Retry, reassess independently, and compare improvements or regressions.

P0 requirements / acceptance

- Guest entry; responsive web on desktop/mobile; realistic and custom scenarios; text and speech-to-text responses.
- Consistent rubrics; apply decision/evidence/trade-off/impact criteria only when relevant; never invent supporting facts.
- Actionable Vira mentoring; independent baseline/retry scores and comparisons; reliable navigation and error handling.
- Supabase-backed sessions and feedback; protected server-side AI credentials; clear distinction between AI and fallback output.

Explicitly out of scope (MVP)

- Real-time, interruptible voice conversations or live stakeholder simulations; video and body-language assessment.
- Full public-speaking courses, anxiety treatment, broad communication curriculum or expanded non-PM personas.
- Enterprise integrations, organizational admin tools, long-term skill analytics and gamification.

Technical approach Next.js 14 + Vercel (web/API); OpenAI-backed Vira with limited heuristic fallback; Supabase for sessions/feedback; browser Web Speech API. Runtime behavior must be verified before submission.

Validation First GTM cohort: 10 PMs — Bhavana, Vivek, Srikanth, Naresh, Santosh (colleagues); Charith, Manav, Nikhil, Chinmay (HelloPM); Ratan (friend). Track completion and feedback separately. Primary: blinded baseline-to-retry assessment. Pilot targets: ≥3/5 improve ≥1 point; ≥4/5 finish practice and find feedback actionable.
